

### **Resistance furnace**

Resistance furnaces designed for drying products for various purposes, including windings of electrical equipment in the air at temperature from +50 to + 400 ° C in stationary conditions. In this model of furnace the heating of the inner chamber is carried out by electric heating elements.

- Independent groups of heating elements provide the ability to control the speed of the furnace to the operating mode, it is possible to use part of heating elements to maintain the temperature
- Quick set temperature
