

TEST LABORATORY

- All types of tests of low-voltage and high-voltage AC and DC electric motors in the process of repairs and in the assembled mode (no load and under load)
- AC and DC motor test with power up to 400 kW under load
- Oil and dry transformers test with power capacity up to 3000 kVA and voltage up to 10 kV
- Electromagnetic plate testing
- Transformer oil testing
- Checking the condition of active iron of electric motors for heating
- Monitoring the condition of various electric equipment coils
- Rectifier Testing
- Production and installation of electrical test circuits
- Diagnostics and technical examination of electrical equipment on-site
- Vibrodiagnostic measurements
- Nondestructive testing of units and parts of electrical machines: ultrasonic, magnetic powder, eddy current, heat monitoring and visual inspection
- Issuing recommendations for extending the guaranteed service life of electrical machines and transformers based on the measurements made

Specialized electro-repairing closed joint-stock company «Volna» (CJSC «Volna»)

220125, Republic of Belarus, Minsk, 23A Uruchskaya Str., room 308
